# DEPARTMENT OF REGULATORY AND ECONOMIC RESOURCES (RER) BOARD AND CODE ADMINISTRATION DIVISION

#### **NOTICE OF ACCEPTANCE (NOA)**

Firestone Building Products Company, LLC 250 West 96<sup>th</sup> Street Indianapolis, IN 46260

#### **SCOPE:**

This NOA is being issued under the applicable rules and regulations governing the use of construction materials. The documentation submitted has been reviewed and accepted by Miami-Dade County RER - Product Control Section to be used in Miami Dade County and other areas where allowed by the Authority Having Jurisdiction (AHJ).

This NOA shall not be valid after the expiration date stated below. The Miami-Dade County Product Control Section (In Miami Dade County) and/or the AHJ (in areas other than Miami Dade County) reserve the right to have this product or material tested for quality assurance purposes. If this product or material fails to perform in the accepted manner, the manufacturer will incur the expense of such testing and the AHJ may immediately revoke, modify, or suspend the use of such product or material within their jurisdiction. RER reserves the right to revoke this acceptance, if it is determined by Miami-Dade County Product Control Section that this product or material fails to meet the requirements of the applicable building code.

This product is approved as described herein, and has been designed to comply with the Florida Building Code including the High Velocity Hurricane Zone of the Florida Building Code.

#### **DESCRIPTION:** Firestone EPDM Single Ply Roof Systems over Wood Decks.

**LABELING:** Each unit shall bear a permanent label with the manufacturer's name or logo, city, state and following statement: "Miami-Dade County Product Control Approved", unless otherwise noted herein.

**RENEWAL** of this NOA shall be considered after a renewal application has been filed and there has been no change in the applicable building code negatively affecting the performance of this product.

**TERMINATION** of this NOA will occur after the expiration date or if there has been a revision or change in the materials, use, and/or manufacture of the product or process. Misuse of this NOA as an endorsement of any product, for sales, advertising or any other purposes shall automatically terminate this NOA. Failure to comply with any section of this NOA shall be cause for termination and removal of NOA.

**ADVERTISEMENT:** The NOA number preceded by the words Miami-Dade County, Florida, and followed by the expiration date may be displayed in advertising literature. If any portion of the NOA is displayed, then it shall be done in its entirety.

**INSPECTION:** A copy of this entire NOA shall be provided to the user by the manufacturer or its distributors and shall be available for inspection at the job site at the request of the Building Official.

This NOA revises NOA No. 13-0423.03 and consists of pages 1 through 13.

The submitted documentation was reviewed by Jorge L. Acebo.

#### **APPROVED ASSEMBLIES**

EPDM, Reinforced, Non-reinforced **Membrane Type:** 

Deck Type 1I: Wood, Insulated

<sup>19</sup>/<sub>32</sub>" or greater plywood or wood plank **Deck Description:** 

System Type C(1): All layers of insulation simultaneously attached; membrane fully adhered.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

Insulation Layer	Insulation Fasteners (Table 3)	Fastener Density/ft <sup>2</sup>
ISO 95+ GL	(1)	2 311510 / 10
Minimum 1.4" thick	1 or 2	1:2 ft <sup>2</sup>
Minimum 2" thick	1 or 2 with 4	1:4 ft <sup>2</sup>
Approved High Density Wood Fiberboard, FiberTop E		
Minimum 1" thick	1 or 2 with 4	1:2 ft <sup>2</sup>

Note: All layers of insulation shall be simultaneously mechanically attached using the fastener density listed above. The insulation panels listed are minimum sizes and dimensions; if larger panels are used, the number of fasteners shall be increased maintaining the same fastener density. Please refer to Roofing Application Standard RAS 117 for insulation attachment.

Gypsum board, minimum thickness ½", placed between the deck and the Fire Barrier

insulation.

Fully adhere any RubberGard® EPDM membrane to the insulation with BA-2004 Membrane:

T, Single-Ply LVOC Bonding Adhesive, or Single-Ply LVOC Bonding Adhesive

1168 at a rate of 60 sq. ft./gal.

Surfacing: (Optional) Firestone Acryli-Top (PC-100) to be applied at 1 gal./ 100 sq. ft. with

an airless sprayer. If roller applied, two separate coats of 200 sq. ft. per gallon are

required.

Maximum Design

Pressure: -45 psf. (See General Limitation #9)

**Membrane Type:** EPDM, Reinforced

**Deck Type 1I:** Wood, Insulated

**Deck Description:**  $^{19}/_{32}$ " or greater plywood or wood plank

**System Type D(1):** Membrane mechanically attached over preliminary fastened insulation.

All General and System Limitations apply. Roof accessories not listed in Table 1 of this NOA are not approved and shall not be installed unless said accessories demonstrate compliance with prescriptive Florida Building Code requirements and are field fabricated utilizing the approved membranes listed in Table 1.

Base Insulation Layer	Insulation Fasteners (Table 3)	Fastener Density/ft <sup>2</sup>
ISO 95+ GL Minimum 1.3" thick	1 or 2 with 4	1:4 ft <sup>2</sup>
Approved High Density Wood Fiberboard, FiberTop E Minimum ½" thick	1 or 2 with 4	1:4 ft <sup>2</sup>

Note: All layers of insulation and base sheet shall be simultaneously attached. See base sheet below for fasteners and density. Refer to Roofing Application Standard RAS 117 for insulation attachment requirements. Insulation shall have preliminary attachment, prior to the installation of the roofing membrane.

Fire Barrier: Gypsum board, minimum thickness ½", placed between the deck and the

insulation.

Membrane: Mechanically attach any nominal 7 1/2' Reinforced RubberGard<sup>®</sup> EPDM

membrane with Firestone All-Purpose or Firestone Heavy-Duty fasteners in 2" Metal Plates (or metal battens) 6" o.c. within the 7" wide side laps, or any nominal 10' Reinforced Rubberguard® EPDM membrane with Firestone All-Purpose or

Heavy-Duty fasteners in metal batten only 6" o.c. with 7" side laps.

Or mechanically attach QuickSeam R.M.A. Strip along its 4" wide center section with Firestone Polymer Batten Strip or Metal Batten Bar and Firestone All-Purpose or Firestone Heavy-Duty Fasteners along the batten strip or with 2" Metal Plates or V-Plates with Firestone All-Purpose or Firestone Heavy-Duty; fasteners shall be 6" o.c. within the QuickSeam R.M.A Strip spaced 7-1/2 ft. o.c. Any Reinforced Firestone RubberGard® EPDM membrane is adhered to each

QuickSeam R.M.A. Strip.

Surfacing: (Optional) Firestone Acryli-Top (PC-100) to be applied at 1 gal./ 100 sq. ft. with

an airless sprayer. If roller applied, two separate coats of 200 sq. ft. per gallon are

required.

MIAMI-DADE COUNTY
APPROVED

NOA No.: 13-0715.01 Expiration Date: 08/10/18 Approval Date: 05/29/14 Page 12 of 13

#### **GENERAL LIMITATIONS:**

- Fire classification is not part of this acceptance, refer to a current Approved Roofing Materials Directory for fire ratings of this product.
- Insulation may be installed in multiple layers. The first layer shall be attached in compliance with Product Control Approval guidelines. All other layers shall be adhered in a full mopping of approved asphalt applied within the EVT range and at a rate of 20-40 lbs./sq., or mechanically attached using the fastening pattern of the top layer
- All standard panel sizes are acceptable for mechanical attachment. When applied in approved asphalt, panel size shall be 4' x 4' maximum.
- An overlay and/or recovery board insulation panel is required on all applications over closed cell foam insulations when the base sheet is fully mopped. If no recovery board is used the base sheet shall be applied using spot mopping with approved asphalt, 12" diameter circles, 24" o.c.; or strip mopped 8" ribbons in three rows, one at each sidelap and one down the center of the sheet allowing a continuous area of ventilation. Encircling of the strips is not acceptable. A 6" break shall be placed every 12' in each ribbon to allow cross ventilation. Asphalt application of either system shall be at a minimum rate of 12 lbs./sq. Note: Spot attached systems shall be limited to a maximum design pressure of -45 psf..
- 5. Fastener spacing for insulation attachment is based on a Minimum Characteristic Force (F') value of 275 lbf., as tested in compliance with Testing Application Standard TAS 105. If the fastener value, as field-tested, are below 275 lbf. insulation attachment shall not be acceptable.
- Fastener spacing for mechanical attachment of anchor/base sheet or membrane attachment is based on a minimum fastener resistance value in conjunction with the maximum design value listed within a specific system. Should the fastener resistance be less than that required, as determined by the Building Official, a revised fastener spacing, prepared, signed and sealed by a Florida Registered Engineer, Architect, or Registered Roof Consultant may be submitted. Said revised fastener spacing shall utilize the withdrawal resistance value taken from Testing Application Standards TAS 105 and calculations in compliance with Roofing Application Standard RAS 117.
- 7. Perimeter and corner areas shall comply with the enhanced uplift pressure requirements of these areas. Fastener densities shall be increased for both insulation and base sheet as calculated in compliance with Roofing Application Standard RAS 117 and/or RAS 137. Calculations prepared, signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant (When this limitation is specifically referred within this NOA, General Limitation #9 will not be applicable.)
- All attachment and sizing of perimeter nailers, metal profile, and/or flashing termination designs shall conform with Roofing Application Standard RAS 111 and applicable wind load requirements.
- The maximum designed pressure limitation listed shall be applicable to all roof pressure zones (i.e. field, perimeters, and corners). Neither rational analysis, nor extrapolation shall be permifdrtted for enhanced fastening at enhanced pressure zones (i.e. perimeters, extended corners and corners). (When this limitation is specifically referred within this NOA, General Limitation #7 will not be applicable.)
- 10. All products listed herein shall have a quality assurance audit in accordance with the Florida Building Code and Rule 61G20-3 of the Florida Administrative Code.
